Dealer portal setup:

- Ensure camera is powered down
- Select "Accounts" on left side. Load customer's account
- Select "Camera" on left side. Select "Add" to add a camera

- Select camera type from drop down menu. Select: "vivotek IP8336W". Enter name and description if desired

- Enter camera MAC address. This is located on back of camera
- Enter the following user name and password: UN: root PW: Camera's MAC ID
- Select "Add"
- Power camera back up
- Camera LED will be red then blink green and blue

Wi-Fi Setup when router has no WPS button:
If it does have WPS: Open bottom camera slot exposing the WPS button (previous page) press & hold WPS button on camera & router. LED will flash green.

- You will need a smartphone or computer
- In your devices wifi settings find the network named TCSN-(last 6 of MAC XX:XX:XX)
- Once connected, camera will be flashing blue and green. This indicates the camera is in access point mode (AP mode)
- On your smartphone or computer open a web browser. Enter "http://192.168.1.1" without quotes
- The page will open to a login screen.
- Username: root
- Password : (MAC address all upper case)
- Select "Search your AP"
- Select your WiFi network
- Enter the WiFi password in the Pre-shared key field, removing the string of 0's
- Save, image number 4 will appear
- After a moment the camera light will go from solid green to blinking green, this will indicate the camera is connected
